Why Us?

MaxSolar is Perth's Solar Panel and Battery specialists.

- > Over 10 years experience in the electrical industry.
- > We are current National Electrical and Communications of Australia (NECA) members and have access to all industry standards and updates.
- > We are fully accredited with the Clean Energy Council (CEC) for the design and installation of solar & battery systems.
- > Only install a selection of high quality products to ensure they will serve you longevity.
- > We are fully insured with public liability and have current WWC.
- > Our process is fine tuned so that we can offer you a fixed price before installation with no hidden costs.
- > We offer honest advice and give practical solutions to any questions in a straightforward manner
- > We believe in doing our part and contributing to a greener future for the years to come.

Testimonials

Matt is a true professional from the start to the finish of the job, with zero shortcuts taken. He is very knowledgeable with current statutory regulations, both electrical and solar. Matt did an extensive shed electrical upgrade and also a solar power installation. We are very happy with his work and highly recommend MaxSolar to anyone looking to go solar. Matt in in this for the long term which was reassuring to us if we ever need help down the track.

Steve L

Had such a great experience with Matt from Max Solar. He was happy to explain the process of installation and came and inspected our place prior to install to make sure we were happy with how he was going to install the panels and cabling. He did everything he said he would. It was great to have the guy selling the system come and install the system too.

Craig A

Extremely happy with the solar system Matt from MaxSolar installed on our new house. I appreciated the attention to detail and the extra effort he went to install the absolute maximum amount of solar panels that would fit on our roof space. Would highly recommend MaxSolar to anyone considering solar panels for their house.

Lee C

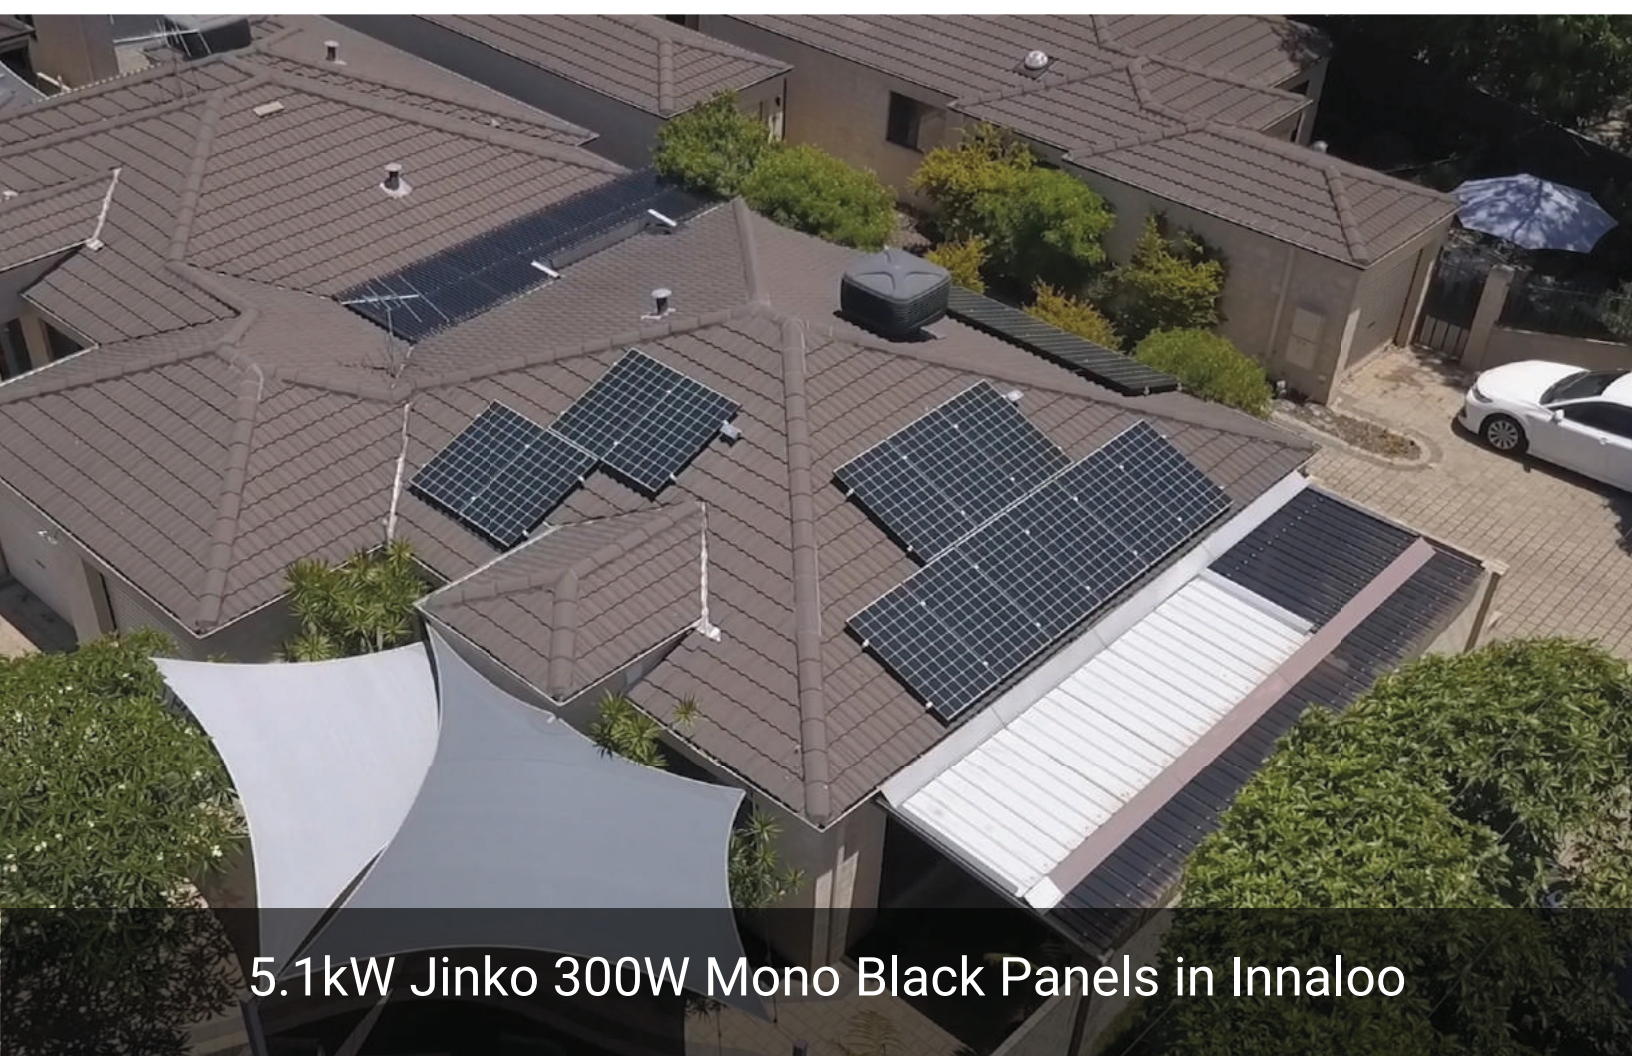

6.6kW Canadian 330W Hiku Split Panels installed on tilts in Yanchepp

6.6kW LG Neon 330W All Black Panels installed in Gidgegannup

6.6kW Canadian Solar 275W Panels installed in Winthrop

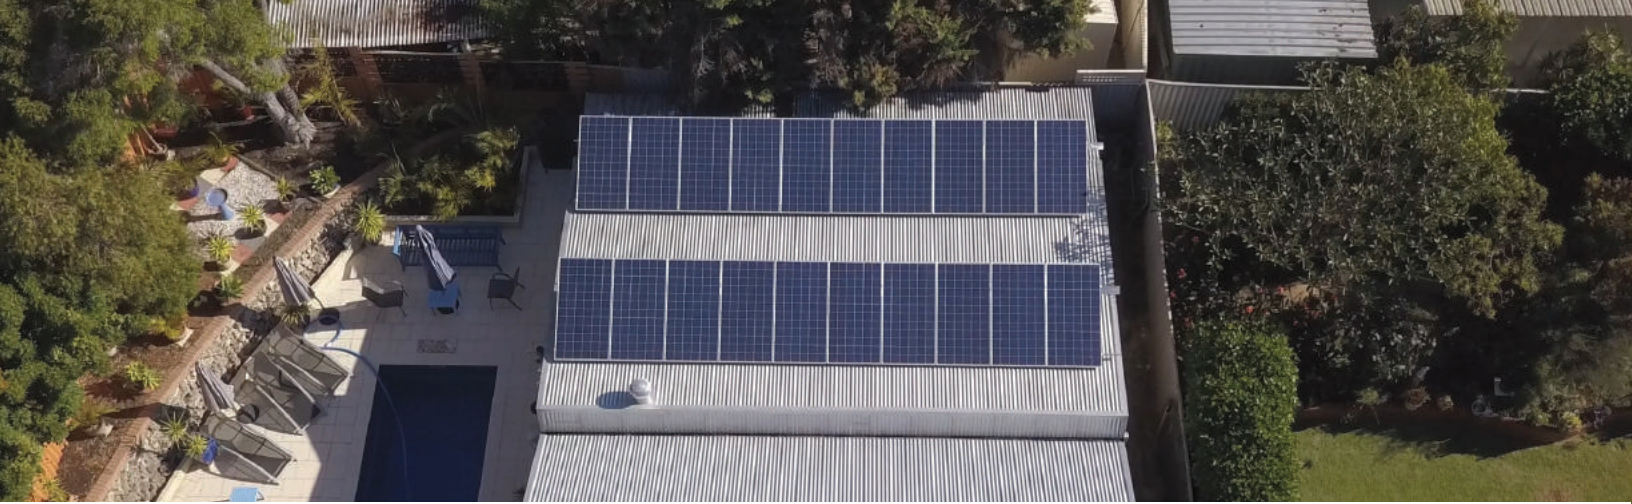

5.1kW Jinko 300W Mono Black Panels in Innaloo

Our Process

- **Initial Enquiry.** We come out to meet you and do a site inspection to gather the information we need.
- **System Design.** We design a system that caters for your needs and usage to ensure maximum performance and maximum savings.
- **Proposal.** We deliver our online proposal which outlines product specifications, panel location and firm price. We don't give quotes without site inspections
- **Quote and Acceptance.** Once you accept the quote we require 30% deposit upfront and the quotation form signed and sent back to us.
- **Application forms.** We fill out on your behalf the application forms to Synergy and Western Power for the approval for Solar on your home. Once approved Western power will come and replace/reprogram your meter.
- **Installation.** We arrange a suitable time for installation to take place once the your meter has been reprogrammed/swapped out. At the time of installation we will give you a run through of the inverter and help you get connected via wifi.
- **Maintenance.** We recommend having your system inspected and maintained atleast once a year. Any problems or concerns with your system we are here to help you sort it out.
